Docket No.: 11530-US-PA

AMENDMENT

In The Claims:

1. (currently amended) An electrical package comprising:

a multi-layer interconnection structure having a top surface, a bottom surface and an inner circuit therein, wherein the inner circuit has a plurality of bonding pads on the bottom surface of the multi-layer interconnection structure;

at least an electronic device positioned on the top surface of the multi-layer interconnection structure and electrically connected to the inner circuit of the multi-layer interconnection structure; and

a support substrate made from a conductive material, wherein the support substrate is positioned on the bottom surface of the multi-layer interconnection structure, and the support substrate has a plurality of first openings, ~~that exposes~~ each first opening exposing one of the corresponding bonding pads; ~~and~~

an insulation layer covering the support substrate and exposing the bonding pads.

2. (cancelled)

3. (currently amended) The electrical package of claim 1, ~~wherein each bonding pad has further comprising a patterned barrier layer covering the bonding pads and thereon such that the barrier layer is exposed by the first openings.~~

4. (original) The electrical package of claim 1, wherein the electronic device comprises a die, a passive component or an electrical package.

Docket No.: 11530-US-PA

5. (original) The electrical package of claim 1, wherein material constituting the support substrate comprises a metallic material or an alloy.

6. (original) The electrical package of claim 1, wherein the package further comprises a plurality of contacts connected to various bonding pads through corresponding first openings.

7. (original) The electrical package of claim 6, wherein the contacts are configured as solder balls, pins or electrode blocks.

8. (original) The electrical package of claim 6, wherein at least one of the contacts completely fills the first opening so that the contact is electrically connected to the support substrate.

9. (currently amended) The electrical package of claim 1, wherein ~~the package further comprises at least an~~ the insulation layer disposed over exposes a sidewall of at least one of the first openings.

10. (original) The electrical package of claim 1, the package further comprises a solder mask layer disposed over a sidewall of at least one of the first openings.

11. (original) The electrical package of claim 1, wherein the electronic device is electrically connected to the inner circuit within the multi-layer interconnection structure through flip-chip bonding, wire-bonding or a thermal pressure bonding.

12-30 (canceled)

31. (new) The electrical package of claim 1, further comprising a patterned barrier layer and a plurality of conductive vias, the patterned barrier layer covering the bonding pads and the

Customer No.: 31561

Docket No.: 11530-US-PA

conductive vias disposing on the patterned barrier layer, wherein the patterned barrier layer and the conductive vias are exposed by the first openings.

32. (new) The electrical package of claim 31, further comprises a plurality of contacts, each contact electrically connecting to one of the conductive vias and the patterned barrier layer, such that the contacts are electrically connected to the bonding pads through the patterned barrier layer and the conductive vias.
